This important and timely collection examines the troubling proliferation of anti-feminist language and concepts in contemporary media culture. Edited by Michele White and Diane Negra, these curated essays offer a critical means of considering how contemporary media, politics, and digital culture function, especially about how they simultaneously construct and displace feminist politics, women's bodies, and the rights of women and other disenfranchised subjects. The collection explores the simplification and disparagement of feminist histories and ongoing feminist engagements, the consolidation of all feminisms into a static and rigid structure, and tactics that are designed to disparage women and feminists as a means of further displacing disenfranchised people's identities and...

Understanding Regression Analysis unifies diverse regression applications including the classical model, ANOVA models, generalized models including Poisson, Negative binomial, logistic, and survival, neural networks, and decision trees under a common umbrella namely, the conditional distribution model. It explains why the conditional distribution model is the correct model, and it also explains why the assumptions of the classical regression model are wrong. Unlike other regression books, this one from the outset takes a realistic approach that all models are just approximations. Hence, the emphasis is to model Nature's processes realistically, rather than to assume incorrectly that Nature works in particular, constrained ways. Key features of the book include, Numerous...
